ABOUT STRUKTURA

The modularity of the system enables countless design combinations and highly versatile applications, all with fully personalized dimensions.

System comes with a unique cordless white LED lighting — integrated lighting without the use of cables. Applicable to all areas of the store, from shop windows to central spaces.

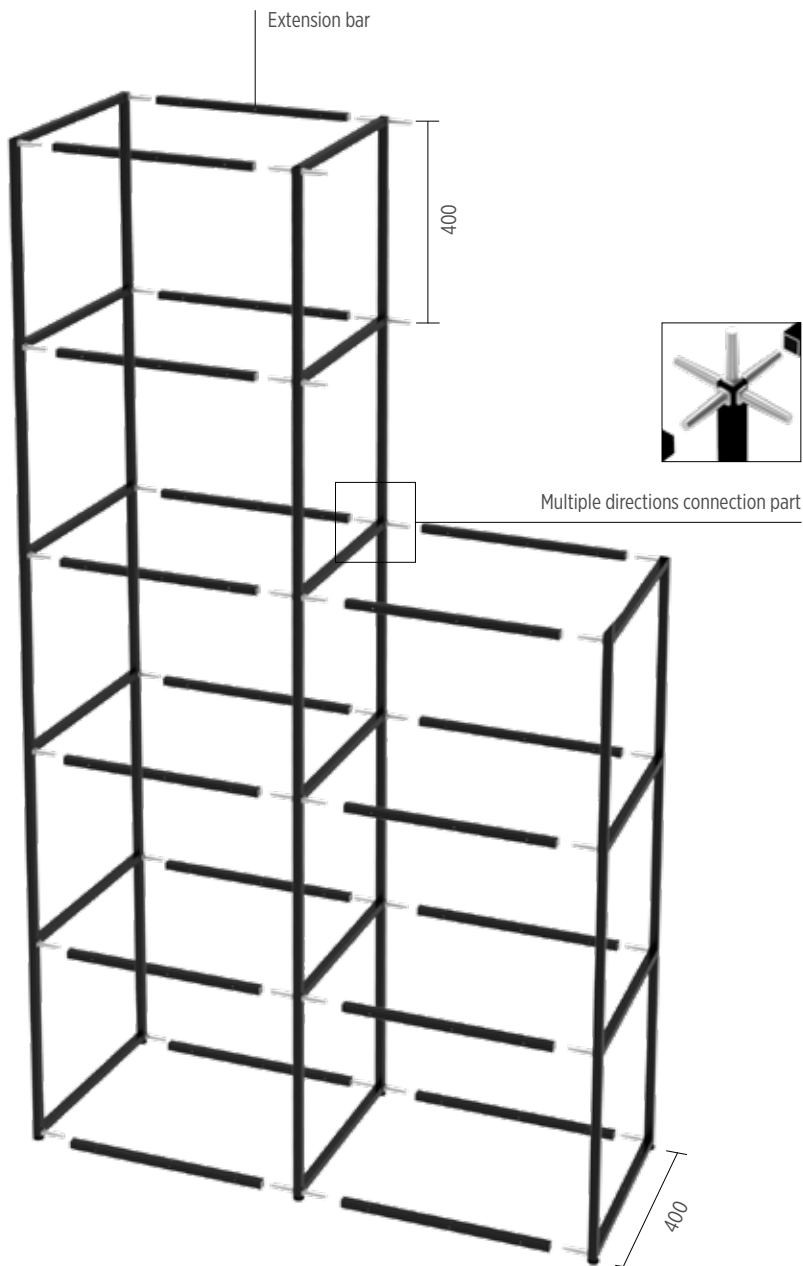

The structure is extremely strong and stable, without the need for additional safety construction elements.

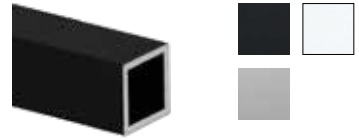

Due to the simplicity of the basic components, the assembly process is very quick, making also transportation process more efficient.

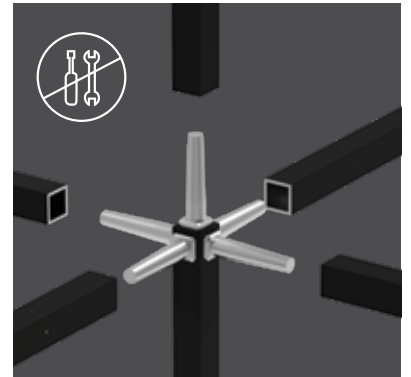

CONSTRUCTION

Aluminium bars form the basis of the system construction. They are only 15 mm thick and are available in standard aluminium gray, as well as with black and white powder coating.

The unique method of connecting the bars* allows for easy and quick assembly of various cubic structures — no tools required. Very simple and convenient for creating completely personalised design solutions.

The resulting structures are very strong and stable.

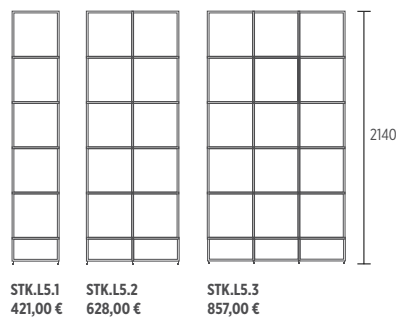

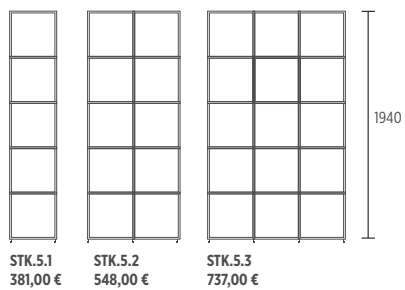

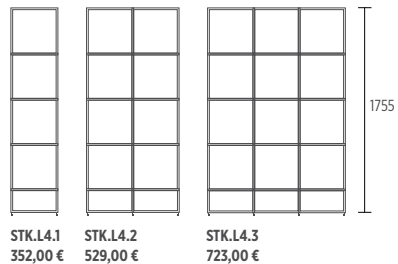

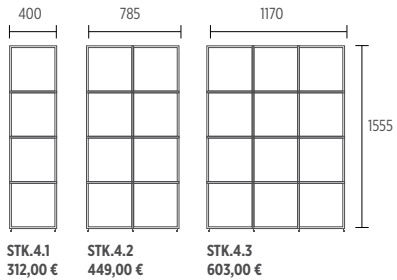

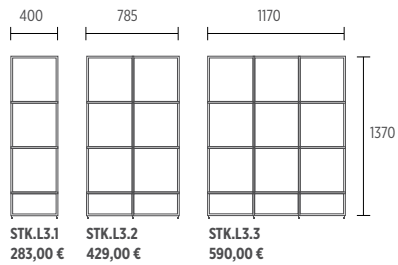

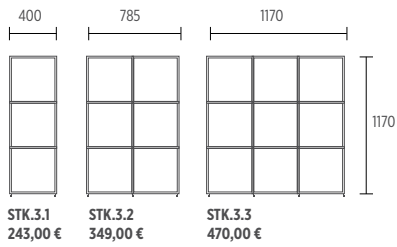

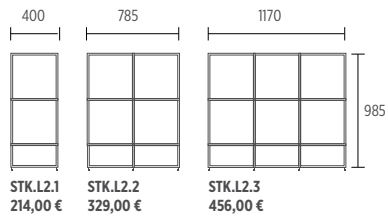

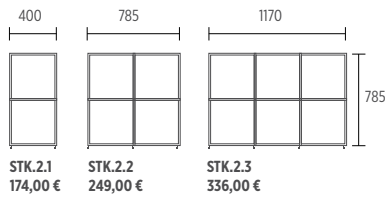

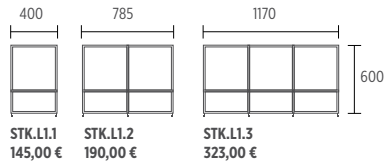

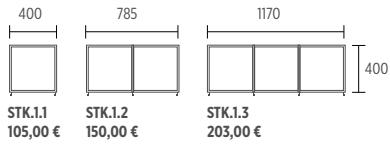

*The product is in the patent application process.

CORDLESS LED LIGHTING

One of the distinctive features that sets the Struktura system apart from similar products on the market is its unique integrated lighting without cables. The entire system, whether it's a single cube or a large composition of 20 or more cubes, can be illuminated with equal intensity in any part of the space.

Electricity is conducted through the bars themselves and operates based on the principle of polarity. As a result, the lighting turns on or off depending on the installed elements.

The light is specifically facilitated through LED shelves, which are available in three types.

The first type of LED shelf is equipped with movable mini spotlights, ideal for situations where directed lighting is needed.

The second type includes a movable LED bar, allowing for various light adjustments.

The third and final LED shelf features integrated LED strips that provide uniform illumination.

WORKING PROCESS

Depending on the requirements of your project, we can offer various planning methods. After defining the planning method, the working process flows simply from design to production and final assembly.

PLANNING

GO CONFIGURE

DESIGN TEAM

BESPOKE DESIGN

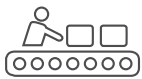

For the Struktura system, there is a simple design software — a configurator that includes all standard elements with the option of personalization. Through a very user-friendly interface and accompanying instructions, you can now easily configure the desired combination.

If you don't have your own designer or architect, we can configure the desired combination for you. We will simply ask you to fill out a short questionnaire, to identify your needs and preferences.

Struktura is a system whose applications and functionalities grow and evolve every day. If you need a specific piece that is not included in our catalog, we provide personalized design services upon request. Feel free to contact us.

OSX/WINDOWS
.obj

Request a free configurator version at
info@presenta-nova.hr

TECHNICAL SPECIFICATIONS & PRODUCTION

The production process itself is very brief, typically taking 3 to 6 weeks. We reserve the right to extend production deadlines due to unforeseen circumstances.

SHIPPING

Due to the simplicity of the construction itself, transportation costs and delivery times are very low.

INSTALLATION

For the assembly of Struktura construction, no tools are required, but we will include a micro-screwdriver and a hammer for the insert elements. Our team of designers and engineers is available at any time to assist you with the installation process.

SHOWROOM

Our newly renovated 220 m2 showroom is located in Mannheim, Germany, just an hour's drive from Frankfurt Airport. The showroom is located in an up-and-coming design district, a former industrial area, and is surrounded by many design companies and popular venues.

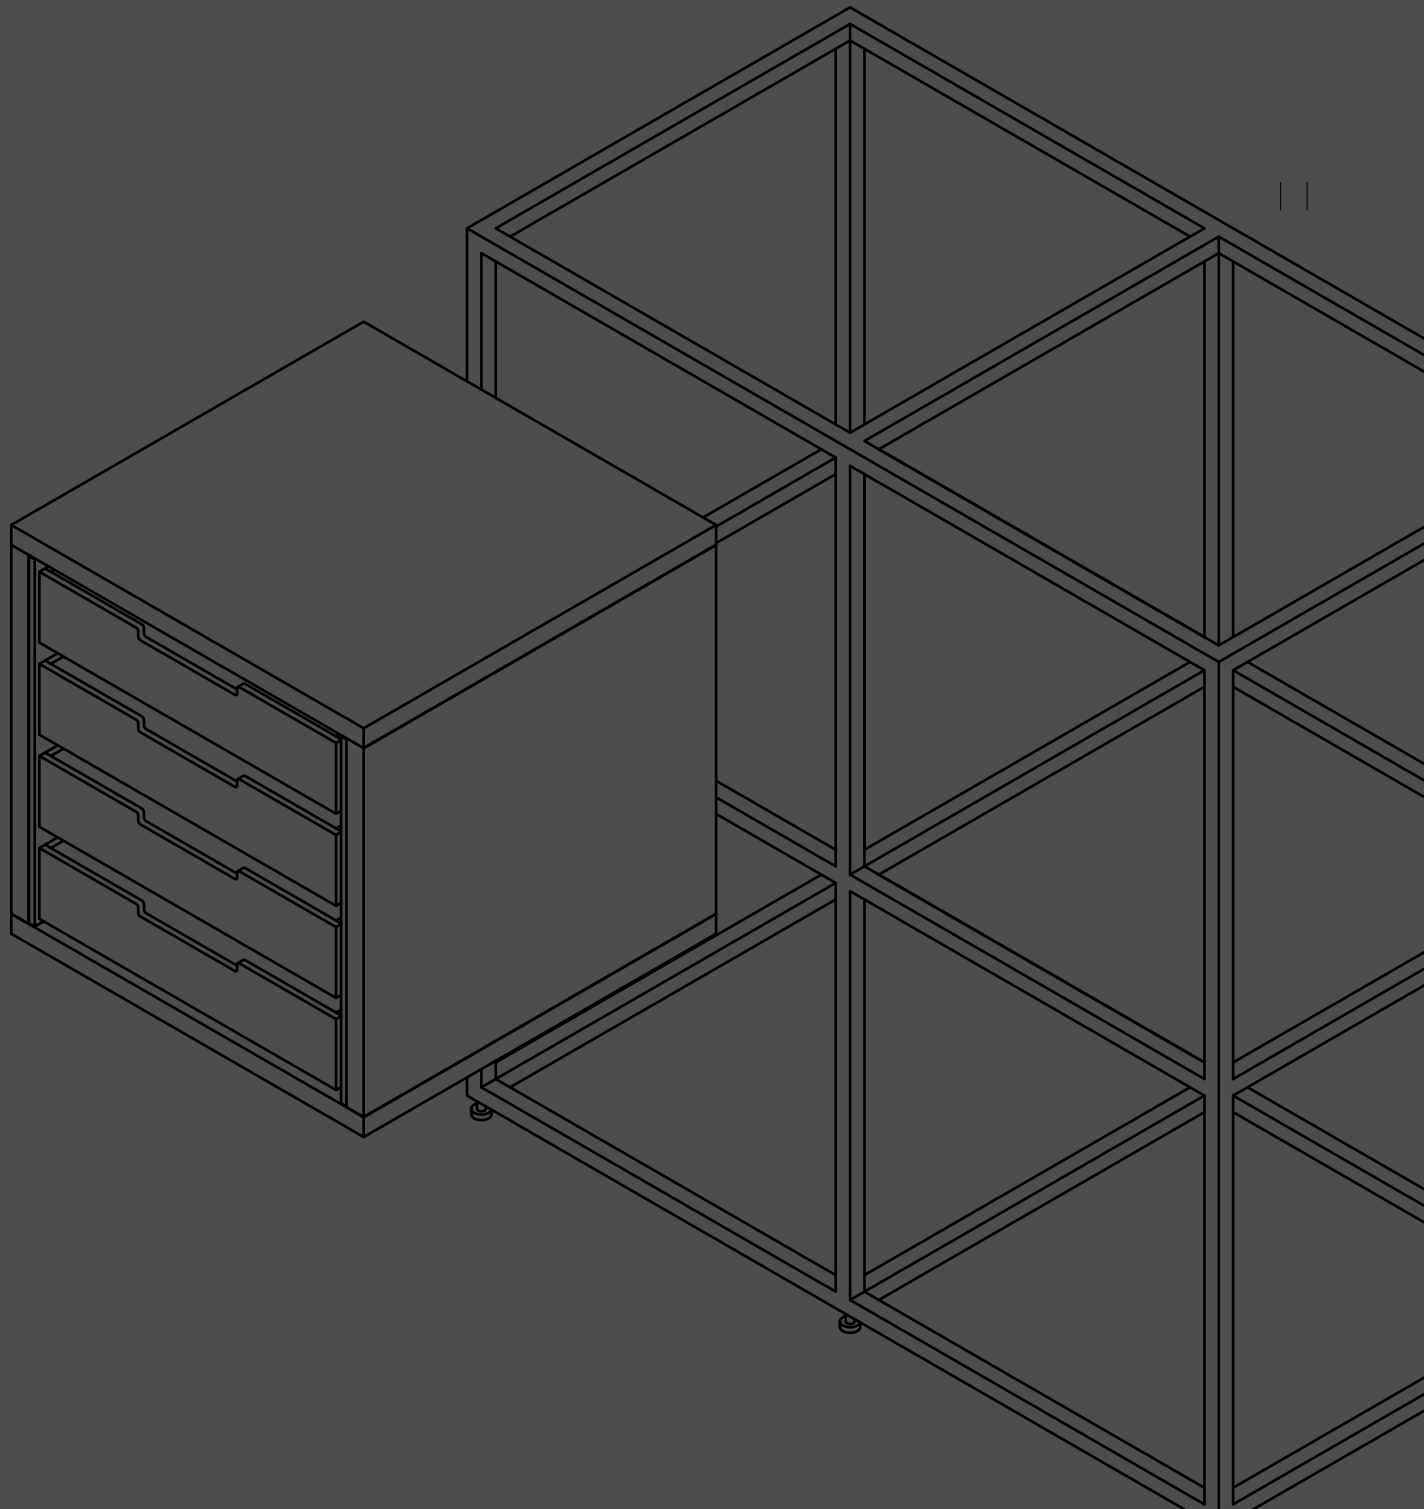

Start your project in a creative and inspirational atmosphere:
Explore the variety of colors, textures and materials available.
Explore the possibilities of flooring and wall cover solutions.
Browse through our portfolio of projects and case studies.
