

STRUKTURA

Modular system for shaping products & spaces.

presentanova[®]

DISCOVER STRUKTURA

STRUKTURA is a unique unwelded structural grid that also functions as an electrical conductor — all cable-free. Made of aluminium bars and featuring a patented tool-free assembly system, it serves as the perfect multipurpose design tool for any product or project, including:

- + Presentation & storage of goods
- + Furniture design
- + Workspace & residential
- + Hospitality & retail design
- + Exhibition & fair design
- + Public cultural interiors
- + Brand experience & concept space

See Struktura
in a project.

MODULARITY

Modular, all the way to the very aluminium bar. Freely stack, upgrade, or repurpose our standard cube modules at any time, or opt for a completely custom design or dimension. Rounded constructions available — unique on the market.

TOOL-FREE ASSEMBLY

Forget welding and screwdrivers. Our multi-axis connection node enables simple, fast, and tool-free assembly.

CABLE-FREE ELECTRICITY

The polarity-based conductive structure acts like a cable, delivering brilliant & safe 12V power. Any element placed on it is instantly powered or lit — anytime, anywhere.

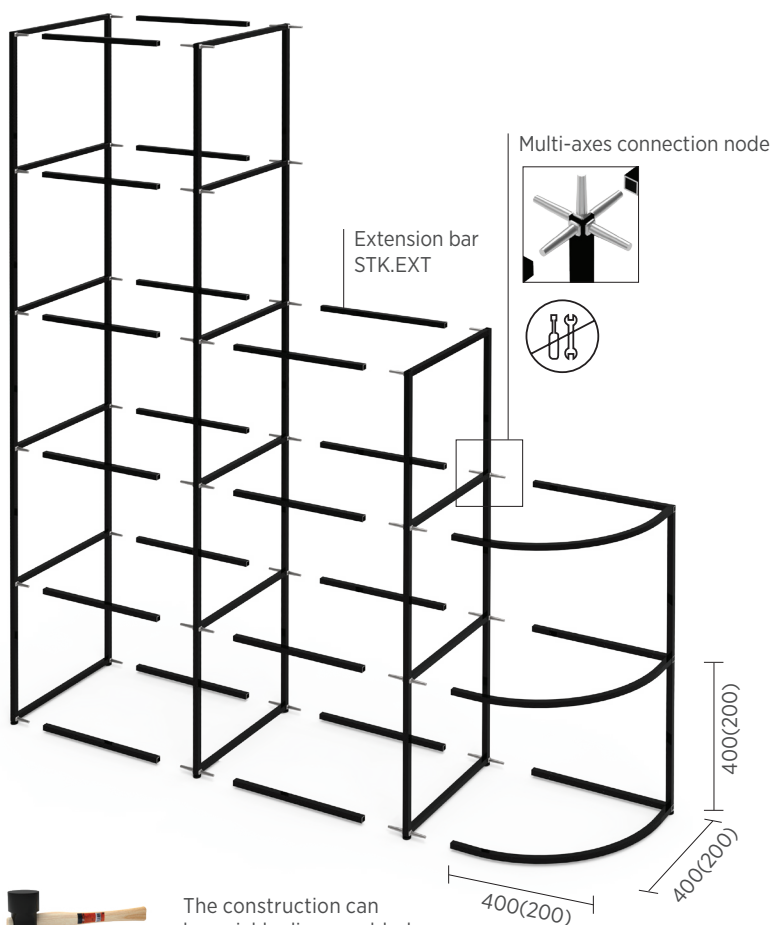

EASY & COST-EFFECTIVE TRANSPORT

All elements can be shipped disassembled to a set of aluminium bar ladders and connecting bars. Efficient packaging for reduced shipping costs.

CONSTRUCTION

Furniture structure made from metal – patent pending.
EU patent application EP 23801465.8
INT. application WO 2024/100204 (PCT/EP2023/081328)

ASSEMBLY & DISASSEMBLY

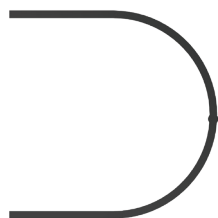

The construction can be quickly disassembled using a rubber mallet.

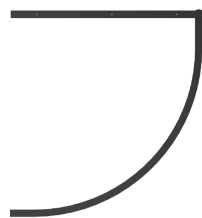

Organic

Unique line of rounded construction endings.

$r = 200$

$r = 400$

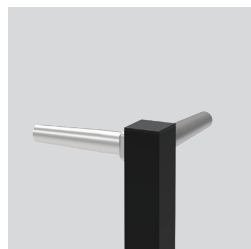

All dimensions are in millimeters.

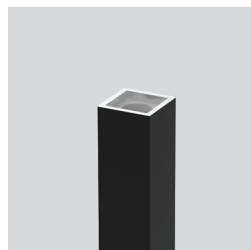

THE BAR

Bars with integrated multi-axes connection nodes. This unique node-connection method enables rapid and straightforward assembly of cubic structures without the use of tools. The system is also suitable for the fabrication of customized design solutions.

Male connection.

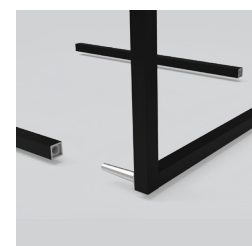

Bar with female connection — extension bar.

15x15 mm aluminium bar
Silver aluminium
Black powder coating
White powder coating

THE LADDER

Ladder is made of 4 aluminium bars which is the base for the construction and for the electrified features. Ladders can be positive and negative electricity conductors. Ladders are mutually connected with extension bars.

CONSTRUCTION MODULES

Modules here shown are also available with an extension (200 mm).
Modules can be easily adjusted to fit custom sizes.
Plates, drawers, lighting and other elements are bought separately.

CABLE - FREE ELECTRICITY

STRUKTURA construction is polarity – driven, which means it can act as an electrical conductor without the need for cables. This ensures lighting and power anytime and anywhere on the construction — no hassle, just plug and play.

Specially designed LED insert plates work like lighting fixtures, ensuring brilliant lighting options. LED plate is installed inside the construction and leveled with it. It rests on small invisible screws which are also electricity conductors. Once the contact is aquired, the lighting turns on.

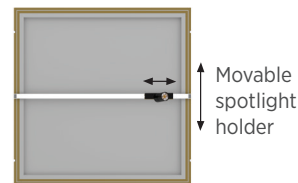

MOVABLE SPOTLIGHTS

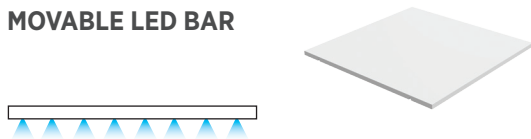

Standard insert plate prepared for installation of movable bars with spotlights or LED bars.
One plate can support several bars.
369x369x10 STK.IPHL

Spotlight holder
370x10x10 STK.SH

Spotlights / 3500 K, 6000 K
Spotlights / 1,5 w SPS
Spotlights / 2 w SPL
Set of 2 spotlights / 3 w SP2S

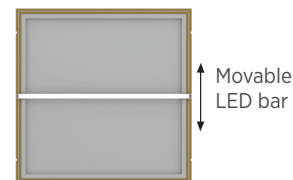

MOVABLE LED BAR

Standard insert plate prepared for installation of movable bars with spotlights or LED bars.
One plate can support several bars.
369x369x10 STK.IPHL

Movable bar with LED lighting.
370x10x10 STK.LS

INTEGRATED LED STRIPES

Insert plate with integrated LED stripes. 4 stripes per plate are standard, but more can be added.

Retail

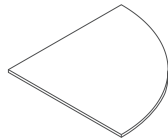

PLATES

INSERT PLATE

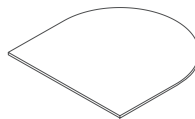

Insert plates have small indents on the bottom which allows the to be inserted inside the structure. Each indent rests on a small microscrew, leveling the plate with the construction. We provide unique rounded plates – Organic line.

COVER PLATE

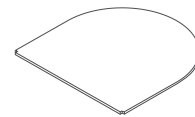

Cover plates are larger in size than insert plates and come with cut out corners. The are installed on top of the construction, covering it partially or fully. This type of plates is very firm and can endure heavy loads.

WORK WITH US

Learn how you can work with STRUKTURA system.

Discover three ways to design with STRUKTURA and choose the one that suits you best.

1 DESIGN SERVICES

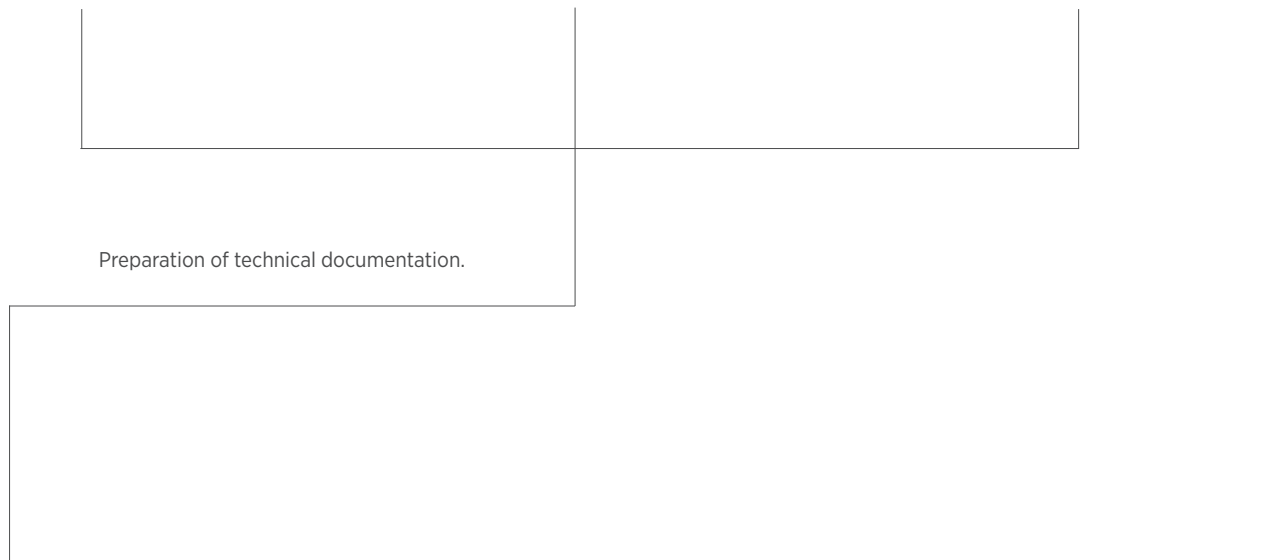

Based on your project brief, we develop a tailored concept using our modular solutions or fully customized elements. Once the design is approved, we proceed with production, ensuring a seamless transition from concept to reality.

2 GO CONFIGURE

If STRUKTURA's standard modules align with your needs, we can provide a simple software to design with STRUKTURA. Download our configurator and assemble your setup independently. The tool includes pricing, so once your configuration is finalized, just export the file and send it to us for production.

3 BESPOKE DESIGN

The STRUKTURA system continuously adapts to new industries and evolving demands. We specialize in the design, development, and prototyping of tailored solutions, working closely with design and trade professionals. Whether you need a reliable partner to execute your project or are still in the early planning stages, we're here to collaborate and deliver.

PRODUCTION

The production process is very short, usually 3 to 6 weeks.

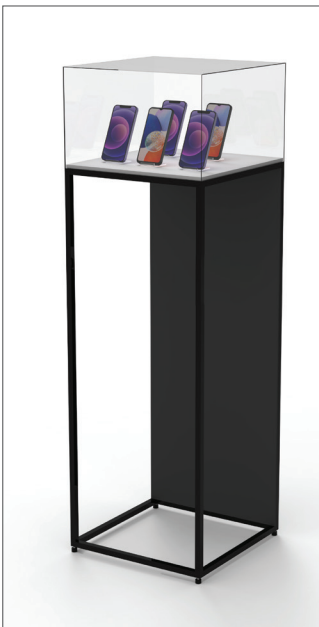

TRANSPORT

Thanks to the simple, modular construction, transport costs and delivery times are minimal.

ASSEMBLY

Installation is straightforward and does not require additional tools. Along with the instructions, we also provide a rubber mallet for easy assembly and disassembly. Our design team is available to provide support during installation.
